

Program:-

```
<form action="#" method="post">
```

```
    Enter the length of Rectangle:<input type="text" name="l"><br>
```

```
    Enter thr breadth of Rectangle:<input type="text" name="b"><br>
```

```
    <select name="op">
```

```
        <option value="area"> Area</option>
```

```
        <option value="peri"> Perimeter</option>
```

```
    </select>
```

```
    <input type="submit" value="submit" name="submit">
```

```
</form>
```

```
<?php
```

```
if (isset($_POST['submit'])) {
```

```
    $l = $_POST["l"];
```

```
    $b = $_POST["b"];
```

```
    if (isset($_POST["op"])) {
```

```
        $op = $_POST["op"];
```

```
        if ($op == "area") {
```

```
            echo "The area of Rectangle is " . ($l * $b);
```

```
        } else if ($op == "peri") {
```

```
            echo "The Perimeter of Rectangle is " . (2 * ($l + $b));
```

```
        }
```

```
    }
```

```
}
```

```
?>
```

Output:-
